***Allowable Subject Matter***

Claims 1 – 20 are allowed.

While League et al. (US 5,587,929) teaches a system and a method for tracking objects using a detection system by receiving frames of data, League et al. is not explicit on *performing object detection with a collision warning and countermeasure system comprising, among other limitations, determining at least one center-of-reflection – by transforming polar coordinates of detected objects into Cartesian coordinates - and at least one center-of-intensity in response to a detection signal and an image detection signal; associating the center-of-reflection with the center-of-intensity; and determining a difference between the two for a plurality of frames and then generating a sensor signal in order to classify the detected object.*

League further fails to teach *determining a set of vectors between the center-of-reflection and at least one centroid; comparing a difference between the vectors and an average distance parameter to determine an updated average distance parameter; determining a subsequent set of regions-of-interest in response to the updated average distance parameter; determining updated centroids in response to the regions-of-interest.*
